

Supply Air? Let us take control... individually!

## New eluft version: eluft T

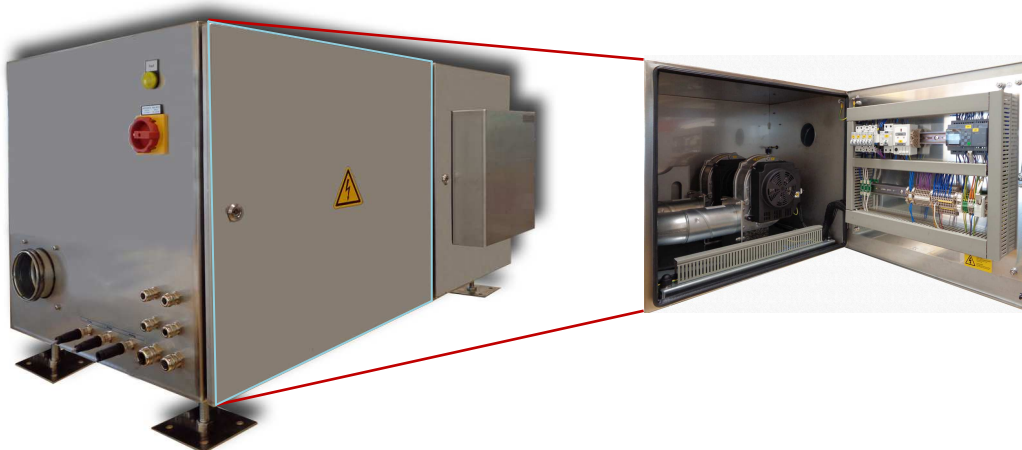

From now on the eluft machines 150, 400 and 600 are also available as eluft **T version**, as an option.

The new **eluft T models** have two doors instead of the large front flap!

The advantage of this design is the easy access to the complete electronics, especially the logic controller with the small maintenance display.

Disadvantages are the difficult connection of sensor cables to the switchboard because of the necessary flexibility of the door transition and, when installed outdoors, that rain water can damage electronics –when the doors are open.
