

EWATCHER (EWÄCHTER)

EFFICIENT NETWORK CONTROLS AND LEAKAGE DETECTION FOR LOCAL AND DISTRICT HEATING SYSTEMS

Features

- Monitoring of the district heating network
- Fault message via SMS and/or cable systems
- Limit values can be freely configured
- Quick identification of energy losses
- Minimization of previously undiscovered defects under warranty
- Continuous storage of measured values
- Remote access to each "ewächter" possible
- Graphic Windows-based software
- Cost savings by detecting damage within the warranty period
- Increase of network efficiency by minimizing heat and water loss
- Quality assurance independent of system manufacturer
- Remote maintenance and remote shutdown, e.g. in case of maintenance works

EWATCHER (EWÄCHTER)

Analysis and evaluation

Analyzing the data from the ewächter may be done by the in-house control center or an analyzing tool, which is part of the new ewächter-system.

You can of course only purchase the device and use your own evaluation software, or let Stadtwerke Rosenheim or elnic look after your networks.
