

Supply Air? Let us take control... individually!

New feature: Snow scales (sand scales)

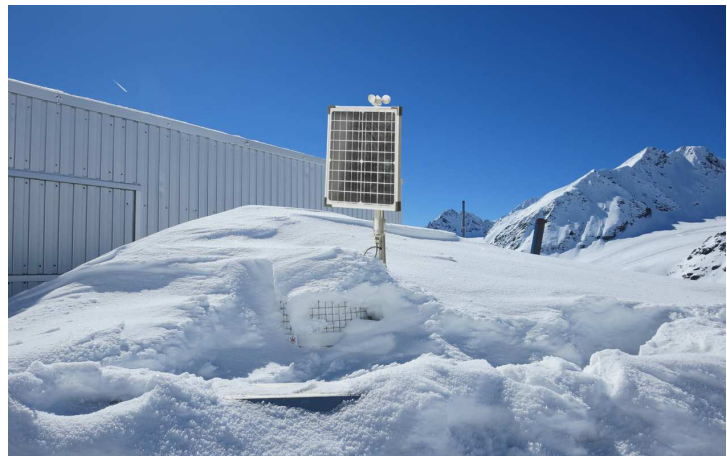

Our newest innovation has to do with the increasingly extreme weather conditions. In addition to the reliable snow detection sensor and snow height sensor, we have now added snow scales to our program.

In this field, we cooperate with a company that has many years of experience with snow scales.

The advantage compared to the snow height sensor is that the specific **weight** of e.g. moist corn snow is also considered.

Here are some example pictures.

With slight modification, the snow scales can also be used to measure **sand** loads.
